

JELMER DE HEN

Security Researcher

@jelmerr@gcb.io in jelmerrdehen JelmerDeHen Netherlands

Security researcher with over 15 years of experience in application security, reverse engineering, threat hunting, and red teaming. Identified high-severity vulnerabilities in Samsung, Google, and Mozilla products affecting hundreds of millions of devices. Led Android threat-hunting R&D at iVerify (Trail of Bits) to detect mercenary spyware.

EXPERIENCE

Founder

General Cyber Ballistics

- 2014 – Present
- Offensive security services: red team engagements, secure code audits, and penetration testing.
- IoT and embedded device security: firmware extraction, reverse engineering, and protocol fuzzing.
- Develop custom offensive tooling for automated vulnerability discovery.
- Build fuzz harnesses for exotic architectures and embedded platforms.
- Samsung security research: critical vulnerabilities in Android, Knox MDM, and SSO (CVE-2019-20613).

Security Researcher

Radically Open Security • Contract

- 2025 – Present Amsterdam, Netherlands
- Penetration testing and source code audits across diverse targets and environments.

Security Researcher

Cure53 • Contract

- 2025 – Present Berlin, Germany
- Penetration testing and source code audits across mobile, cloud, blockchain, healthcare, and identity platforms.

Head of Android R&D

Trail of Bits / iVerify

- 2022 – 2024 New York, United States
- Led the Android threat-hunting initiative to identify mercenary spyware (Pegasus, Predator) on mobile devices.
- Developed the iVerify Android application, malware detection engine, and backend infrastructure.

KEY SKILLS

- Application Security
- Binary Analysis
- Cloud & Kubernetes Security
- Dynamic Instrumentation
- Exploit Development
- Fuzzing
- Hardware Security
- IoT & Firmware Analysis
- Mobile Security
- Red Teaming
- Reverse Engineering
- Threat Hunting

PROGRAMMING

- C
- Go
- Java
- Kotlin
- PHP
- Python

LANGUAGES

- Dutch
- English

HONORS & AWARDS

- Samsung Mobile Security Hall of Fame (2019)
- Salesforce Hall of Fame (2016)
- Mozilla Bug Bounty Hall of Fame (2013)
- Google Security Hall of Fame (2011)

HACKERONE EVENTS

- H1-702 2018 (1st place, team)
- H1-702 2016 (2nd place)
- H1-4420 London 2019
- H1-3120 Amsterdam 2018
- H1-415 San Francisco 2017
- H1-702 Las Vegas 2017

Senior Security Researcher

Include Security

📅 2020 – 2022

📍 New York, United States

- Secure code reviews and penetration testing for Fortune 500 clients across web, mobile, and cloud environments.
-

Senior IT Security Researcher

Cycura

📅 2015 – 2020

📍 Toronto, Canada

- Exploit and implant development, code reviews, and pentesting.
 - Physical security audits for healthcare and energy sectors.
-

Forensics / eDiscovery

Holland Integrity Group

📅 2011 – 2014

📍 Almere, Netherlands

- Digital forensics, reverse engineering of proprietary file formats, and data indexing for financial fraud investigations.
-

Fullstack Developer

E11EVEN

📅 2011 – 2014

📍 Apeldoorn, Netherlands

- Built APO11O – a data ingestion and search platform for collaborative investigations. Also performed penetration testing, incident response, and computer forensics.
-

Content Manager

Certified Secure

📅 2010 – 2011

📍 The Hague, Netherlands

- Created hacking challenges, educational content, and published security research with the community.
